What is elif?

The elif statement in Python is short for "else if" and is used in conditional programming to check multiple conditions sequentially after an initial if statement. It allows a program to make a decision from more than two possibilities and prevents excessive indentation from using multiple nested if statements.

Syntax of elif

if condition1 :

 # code block 1

elif condition2 :

 # code block 2

elif condition3

 # code block 3

else :

 # code block if none of the above conditions are true

Example

- `x = 10`

`if x > 10:`

`print('Greater than 10')`

`elif x == 10:`

`print('Equal to 10')`

`else:`

`print('Less than 10')`
